

SPAWAR  
Systems Center  
San Diego

# UAV Initiative

- Unmanned Aerial Vehicle (UAV) technology has matured sufficiently to make UAVs an indispensable C4ISR tool for the warfighter.
- SSC San Diego is currently working in conjunction with SPAWAR Systems Command to establish a UAV Project Office to ensure:
  - UAV sensor packages, data and command and control links are fully integrated with Navy tactical systems, both ashore and aboard ship.
  - Appropriate dissemination of data from the UAV control station(s) to the warfighters.
- SSC San Diego has a variety of system integration, test and evaluation assets available to the UAV community to help achieve these objectives.
